DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 10-12 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claim 10 recites a heating source operably coupled to the second recess, this is unsupported in the specification, as the specification discloses a heating source coupled to a second surface of the heating plate.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5, 6, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by **Hardy et al (5,343,012)**. **Hardy et al** discloses an apparatus for heating a substrate and includes a hot plate (10) having a first and second surface (SEE Figure 2), a first recess (16) defined in part by a wall and a bottom (Figure 2) having a uniform depth as

specified by the applicants' invention and sized such that an outer portion of the edge of a wafer substrate (14) contacts a portion of the first surface, a second recess (18) defined in part by a wall and a bottom having a uniform depth, and a heating source (12) operably coupled to the second surface of the hot plate (10); hot plates made from silicon carbide are very well known in the art.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Hardy et al (5,343,012)**. **Hardy et al** discloses the applicants' primary inventive concept as stated above but does not particularly discuss the dimensional requirements of the contact surfaces between the substrate and the first surface, nor the depth. It would have been obvious to a person having ordinary skill in the art to which the subject matter pertains to have modified the hot plate of **Hardy et al** by adjusting the dimensions of the depth and the contact area for the purpose of achieving a desirable result of baking a substrate since the applicant has not stated that having these particular dimensions solves any stated problem or is for any particular purpose and it appears that the hot plate would work equally well with the structure of **Hardy et al**.

All wable Subject Matt r

Claims 4, 7, and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
